CONCLUSION

A client had an inquiry about the effectiveness of this batch of peptides so routine testing was conducted to determine the strength and purity of the batch. The vial contained a white lyophilized powder of unknown substance thought to be semaglutide 5mg. The vial has a blue cap.

The sample was analysed using Reverse Phase High Performance Liquid Chromatography (RP-HPLC) and determined to contain 99.5% semaglutide (5.40 mg), and the rest are impurities of minor significance.
